## 580: Algorithms Tutorial 1

- 1. Using asymptotic notation, state an upper and lower bound for the time complexity of the SimpleSearch procedure for any input. Can you also give a tight  $(\Theta)$  bound?
- 2. (Cormen Exercise 3.1-4). The formal definition of O is:

 $O(g(N)) = \left\{ \begin{array}{c} f(N) \mid & \text{there are positive constants } c \text{ and } N_0 \\ & \text{such that } 0 \leq f(N) \leq c \, g(N) \text{ for all } N \geq N_0 \end{array} \right\}.$  Using this definition, show whether each of the following statements is true or false.

- (a)  $2^{N+1} =$
- (b)  $2^{2N} = O$  https://eduassistpro.github.io/
  If  $a_0$  and  $a_1$  are constants, and  $a_2$  is a positive con  $2N^2 + a_1N + a_0$  is not in O(N). What are the consequences for algorithm d of these consequences O(N) where O(N) is of these consequences O(N) of these consequences O(N) is O(N) is O(N). 3. If  $a_0$  and  $a_1$  are constants, and  $a_2$  is a positive con
